AB The efficacy of amide- and ester-linked local **anesthetics** is increased by administering **methanesulfonamide** compds. (e.g., **ibutilide** and **sotalol**) as adjuvants with the local **anesthetics**. The effectiveness of these compds. as adjuvants is further increased by the concomitant administration of epinephrine. Pharmaceutical compns. comprising an amide- and ester-linked local **anesthetic** and a **methanesulfonamide** compound, which may further include epinephrine, are also provided. Expts. were conducted to determine whether **ibutilide** would enhance the local **anesthetic** effects of **bupivacaine-HCl**. **Bupivacaine** elicited dose-dependent **anesthesia**. However, in the presence of **ibutilide** the potency of **bupivacaine** was increased 2.8-fold. **Ibutilide** alone as an adjuvant was inactive in eliciting **anesthesia**. However, **ibutilide** significantly increased the amount (or efficacy) of **bupivacaine anesthesia**, without increasing **bupivacaine's** duration of action. **Ibutilide** significantly enhanced the relative potency of **bupivacaine**, indicated by a significant leftward shift in the dose-response curve with respect to the dose-response curve of mice injected with vehicle and increasing doses of **bupivacaine**.
